Julia Wiśniewska

Frontend Developer | pierwsza praca
kursant3@example.com | +48 000 000 003

Profile

Entry-level Frontend Developer looking for a first professional role. I build React and TypeScript interfaces and document what I implemented. My portfolio contains two independently built projects.

Projects

LocalEvents, 2026. I designed and implemented event search, date filters and a favourites list in React and TypeScript. A service module isolates API requests from UI components. I added loading, empty and error states; API errors offer a retry action. I wrote 14 component tests using React Testing Library for filters and error recovery. I checked keyboard navigation and labelled form inputs. The demo uses a public dataset, not production customer traffic. Source: https://example.com/julia/local-events. Demo: https://example.com/julia/demo

Projects continued

BudgetNotes, 2025. I implemented expense entry and monthly summaries with localStorage persistence. I chose a reducer to keep state transitions in one place. It has no login or backend, which I describe in the README. A fellow student reviewed my form validation; I fixed two edge cases they reported.

Skills

React and TypeScript used in both projects. Vitest and React Testing Library used in LocalEvents. CSS Grid and responsive layouts. Git branches and pull requests for peer review. Basic REST API integration.

Education

2025-2026, frontend evening course. 2025, BA in linguistics. English C1. No professional software development experience yet.
